

We develop native iOS and Android apps
From idea to launch

THUNDERRISE

Our Process Of Work

The whole development process is divided sequentially into several stages to achieve placed goals one by one and overcome clients expectations.

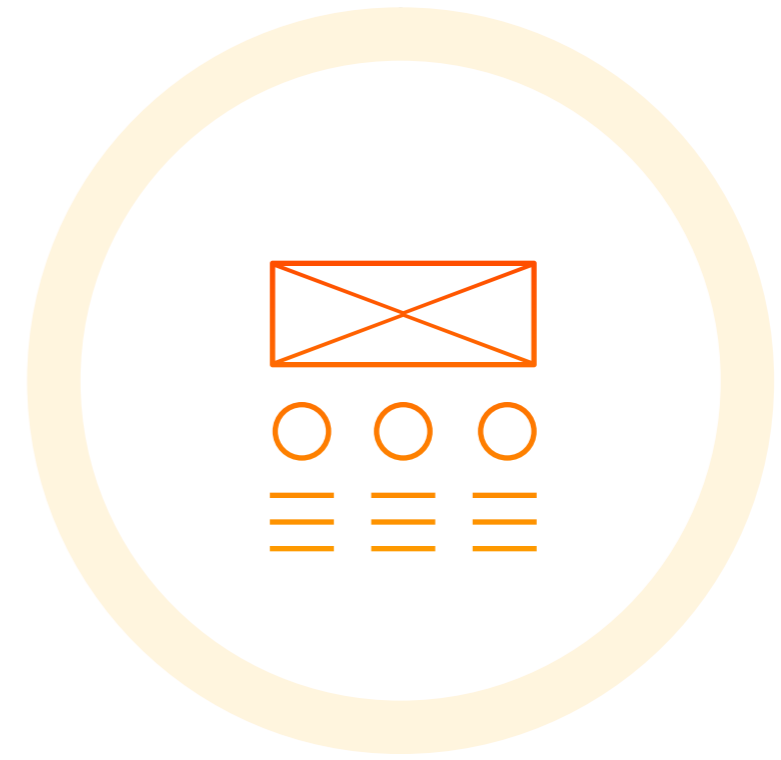

Analysis

Is the initial stage of the project during which all the info and requirements are collected. We get an insight of your business specifications to clearly determine project objectives. During the compilation of SOW (Statement of Work) the whole team is involved into close communication with a customer.

Prototyping

This is the first and one of the most important phases in the creation of a fine product.

It allows to set up the basis of the functionality, project user stories, see how users interact with the app, and evaluate the feasibility of the ideas.

Design Concept

After you have validated your ideas and have the prototype it's time to proceed to design concept. This stage is dedicated to finding the right color scheme. If you have specific ideas in mind then our UI designers will provide you with an elegant solution.

Final Design Development

We polish all elements of the interface and slice them for the following stage of development.

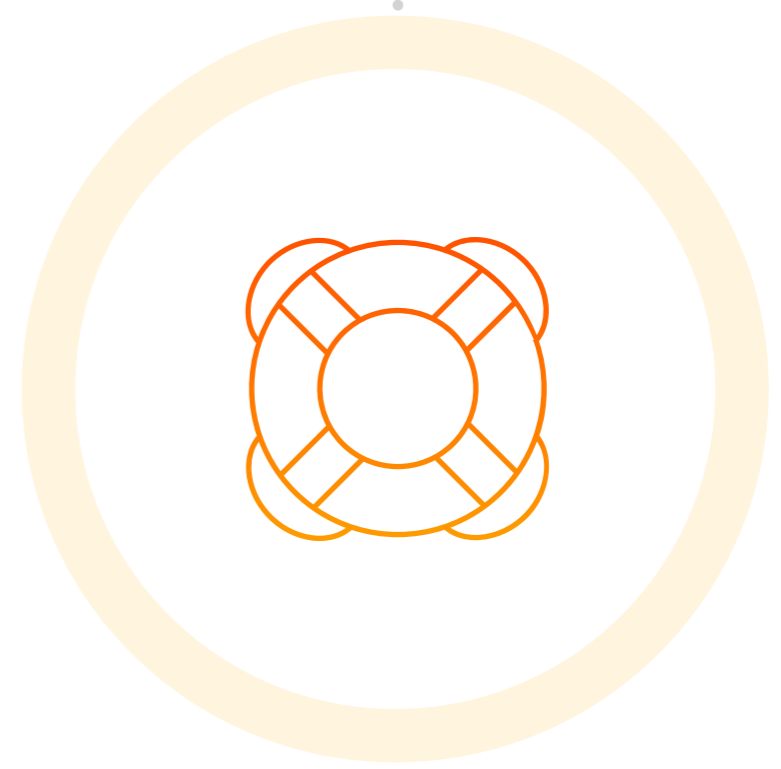

Software Development

We build the development process in accordance with proved to be effective Agile methodologies like Scrum, Kanban, and Lean.

The flexibility of our processes allows us to immediately respond to any unexpected situation.

Deployment and support

When the project is complete we provide maintenance and offer further updates.
